HISTORICAL GEOGRAPHY OF CROP PLANTS: A SELECT ROSTER BY JONATHAN D. SAUER PDF

Historical Geography of Crop Plants is devoted to a variety of staple and food crops, as well as fodder, fiber, timber, rubber, and other crops. The origins and histories of many of these crops have been clarified only recently by new research. The book has been arranged alphabetically by family and higher taxa for easy reference. Within families, species and cultivars are listed chronologically and geographically. The taxonomy and geography of probable wild progenitors have been outlined, and archeological evidence (when available) and historical evidence on region and domestication are traced. The subsequent evolution and spread of many domesticated species are examined, and the reasons behind the diversity in crop histories are explored. Historical Geography of Crop Plants will be a useful reference for botanists, economic botanists, ethnobiologists, agronomists, geographers, and others interested in the subject.

A select book

By P. van Rijckevorsel

This is a scholarly summary of what is known about the origins of our prominent crop plants; botanically and geographically. This book is very carefully written and avoids any unnecessary ramifications. However it does contain a wealth of detail: why is one of the American cottons traded under the name of 'Egyptian cotton'? What is the crop with most sets of chromosomes? Etc, etc. Highly recommend for those interested in the backgrounds of the worlds crops.

16,3x24x2,4cm; v + 309 pp; not illustrated; very brief glossary; carefully selected list of references
