About the Author

Simon Buxton

Simon Buxton has worked with Dynamics AX since its earliest incarnations, starting out as a consultant and developer in early 1999 when Dynamics AX was known as Damgaard Axapta 1.5. Simon quickly became a team leader at Columbus IT Partners and carried out one of the first AX implementations in the UK before joining a new reseller, Sense Enterprise Solutions, as its technical director. Sense Enterprise Solutions enjoyed a global reach through the AxPact alliance and Simon was placed as AxPact's technical lead. Simon played a major role in expanding the company to become a successful Microsoft partner and was the technical lead on a number of highly challenging technical projects around the world, from the UK, to Bahrain, to the USA. These projects included developing solutions for third-party logistics, multichannel retail, and eventually developing an animal feed vertical, as well as integrating Dynamics AX into production control systems, government gateways, and e-commerce solutions, among others. Sense Enterprise Solutions was sold to a major PLC and since then, Simon has teamed up with Binary Consultants as their technical architect, where he works with some of the most technically able AX and Microsoft .NET professionals in Europe. Binary Consultants are involved in the implementation, upgrade, and support of Microsoft Dynamics AX, the development of add-ons for AX 2012 and AX 7 (under the name Axponents), and vertical solutions in animal feed. Simon was the author of Microsoft Dynamics AX 2012 R2 Administration Cookbook, published in 2013, by Packt Publishing, and was a reviewer on Implementing Microsoft Dynamics AX 2012 with Sure Step 2012, which was published by Packt Publishing in March 2013.

Mat Fergusson

Mat Fergusson started his journey into software development in 1998 by studying software engineering at Sheffield University. After graduating, Mat took to working in IT infrastructure, quickly progressing from desktop support to infrastructure implementation and management. Armed with real-world experience of

supporting users and seeing how applications and infrastructure are actually used, Mat began moving back into full-time application development, building classic ASP applications at the tail end of the .com boom. Mat was among the very early adopters of Microsoft's next generation development platform, .NET. Over the next few years, Mat would develop numerous web applications and integration projects using VB.NET and later C#, and in 2005, he started developing mobile business applications built on the Windows CE platform years before the iPhone made mobile applications ubiquitous. After completing the first release of an award-winning hosted health and safety mobile application, Mat decided to gain some broader experience and embarked on a one and a half year world tour, which saw him broadening both his IT and life skills by working for the Enterprise Applications division of HP in New Zealand and becoming a certified dive master in Thailand. Returning to the UK, Mat teamed up with his old colleagues and between them, they founded Binary Consultants, where he continues to work today. In the last 6 years, Mat has continued to refine his .NET development skills in his role as .NET Lead at Binary, and has been responsible for several highly specialist web applications for the cosmetic industry in Russia and the rapidly growing online gaming industry in Malta. In the last 2 years, Mat has started cross training in AX development, an experience that has helped him directly in writing this book with Simon. Mat's current specialty however, is the development of .NET applications for Binary's clients that extend the capabilities of AX by interfacing with the WCF services exposed by the AIF, introducing rich visualization and interactions that simply aren't possible with the AX client.

Very disappointed
By SMou
I am under impression that neither the authors, nor the publisher's copy-editors cared to proof-read the book. That's why it is full of controversial and plain wrong statements; there are out of place paragraphs which are difficult to relate to anything in the chapter they are placed on; there are references to the unexisting chapters and topics that had not been introduced(Chapter 1 for example refers you to a topic which the authors and copy-editors claim was "discussed in the previous chapter" – where is my Chapter 0 then?). I can go on and go on and go on.
It's not the reader's job to make sense out of the book; it's the author's responsibility to make understanding feasible. I am very disappointed and can't recommend this book to anyone.

One of the best books I've read aimed at AX2012 developers!
By Tommy Skaue
This is the book I will be recommending Dynamics AX2012 developers to read. I am impressed by the amount of walkthrough examples and guides. It is packed with content and both new and veteran developers can use this book to stay on top of AX2012 development. The book can be used for internal training or for rampup un your existing development skills. I bet most developers would want to go back and reread chapters whenever they need. I highly recommend this book for any AX2012 developer. Congratulations to the authors on completing this work. I wish there were books like this when I started working with Dynamics AX as a developer.

Excellent Guide Book for Trainee Developers
By Angela B
An excellent reference for programmers new to developing in Dynamics AX, also useful for those new to AX 2012 with good details about the features introduced in that version.

This book takes the reader through a very comprehensive case study, for developing a simple Fleet Management scenario in AX. All aspects are discussed, including solution design & planning, programming from data structures to user security setup, unit testing and performance profiling.
